

Marianna Sadagurski , Ph.D.

Assistant Professor
Wayne State University, Detroit, MI
sadagurski@wayne.edu

Education and Training:

- 09/1997-07/2000 B.Sc. Major: Biological Science, Tel Aviv University, Israel
- 09/2000-05/2006 Ph.D. Department of Pathology, Tel Aviv University, Israel
- 02/2003-03/2003 Visiting graduate student, German Research Cancer Center, (DKFZ), Heidelberg, Germany
- 12/2003-03/2005 Graduate student training (TAU-NIH), Derek LeRoith (advisor), Diabetes Branch, NIDDK, NIH
-

Academic Appointments:

- 5/2006-8/2012 Postdoctoral research associate, Morris White lab. Department of Endocrinology, Harvard Medical School, Howard Hughes Medical Institute, Boston, MA
- 8/2011-8/2012 Research associate, Martin Myers lab, MEND Institute, University of Michigan, Ann Arbor, MI
- 8/2012-8/2015 Assistant Research Scientist, Richard Miller lab, Department of Internal Medicine, University of Michigan, Ann Arbor, MI
- 8/2015-11/2016 Assistant Research Professor, Department of Internal Medicine, University of Michigan, Ann Arbor, MI
- 11/2016-present Adjunct Assistant Research Professor, Department of Internal Medicine, University of Michigan, Ann Arbor, MI
- 11/2016-present Assistant Professor, Department of Biological Sciences, IBio, Wayne State University, Detroit, MI
-

Research Support:

Ongoing Research support

Wayne State University startup funding
Role: Principal Investigator (Sadagurski)

11/15/2016-11/1/2020

Previous Research Support

Pilot Grant from the Michigan Diabetes Research Center (MDRC) 1/1/2016 – 1/1/2017
(P30DK092926) \$50,000

Role: Principal Investigator (Sadagurski)

Role of growth hormone receptor (GHR) in nutrient-sensing leptin receptor expressing neurons in physiology and neuronal function

The goal of this study is to investigate the role of GH signaling in specific hypothalamic neurons

Glenn Foundation for Medical Research 9/1/2015-8/31/2016
UM Glenn Center for Aging Pilot Grant \$50,000

Role: Principal Investigator for Pilot Grant (Sadagurski)

Effect of anti-aging drugs on age-related CNS inflammation

The objective of this study is to evaluate neuroinflammatory changes in mice exposed to anti-aging drugs

Research Career Development Core Award 09/01/2014-08/31/2016
Claude Pepper Older Americans Center/NIH (P30 AG024824)

Role: Principal Investigator (Sadagurski)

The goal of this support is to support salary of the PI while conducting the research on the role of hypothalamic inflammation in aging mice models

Claude D. Pepper Older Americans Independence Center/NIH (P30 AG024824)
Role: Principal Investigator for Pilot Grant (Sadagurski)

12/01/2015-11/30/2016

UM Geriatrics Center Pilot Grant \$40,000

Role of hypothalamic inflammatory response on aging

The objective of this study is to evaluate hypothalamic inflammatory responses in mice exposed to drugs that slow aging

NIH P30 AG013283 02/16/2014-02/10/2015

Nathan Shock Center Aging Rodent Core Support

Role: Principal Investigator (Sadagurski)

Generation of mice lacking GHR in leptin receptor neurons

The major goal of this support is to generate and assess whole body metabolism in mice lacking growth hormone receptor in leptin receptor expressing neurons

Pilot Grant from the Michigan Diabetes Research Center (2P30-DK020572)
1/1/2014 – 12/31/2014 \$50,000

Role: Principal Investigator (Sadagurski)

Hypothalamic inflammation in long-lived mice models

The objective of this study is to test the idea that "crowded litter" or CL mice modulate inflammatory pathways in the hypothalamus

Pilot award from Nathan Shock Center for the Biology of Aging (AG-13283)
8/1/2013-7/31/2014 \$40,000

Role: Principal Investigator (Sadagurski)

Hypothalamic regulation in crowded litter mice: early life control of aging and longevity
The objective of this study is to test whether reduced availability of milk during the first 3 weeks of life can "reset" the hypothalamic control of appetite and thus prolong adult health and longevity

Nathan Shock Center of Excellence in Aging/NIH (P30 AG013283)
Functional Assessment Core Support

Role: Principal Investigator (Sadagurski)

07/24/2013

The role of metabolic regulation in the long-lived crowded litter mice
The major goal of this support was to assess parameters of energy balance in the crowded litter (CL) mice

P01-AG031736-01

Role: Co-investigator (Sadagurski)

04/1/2009 – 03/31/2014

Somatotrophic Axis and Healthy Aging: A Search for Mechanisms. Project 3: "IGF-I Effects on Stress Resistance and Lifespan,"

This study analyzes stress responses in skin fibroblasts from mice with organ-specific reductions in GH receptor function.

Ellison Medical foundation

White MF, PI, Role: Postdoctoral fellow (Sadagurski)

11/01/2008-11/30/2012

Irs2 signaling in neuronal degeneration and life span

The objective of this study was to test whether IRS2 promotes neural degeneration, and progression of Huntington disease.

NIH-TAU Graduate Excellence Partnership Fellowship

Graduate school fellowship for M. Sadagurski. NIH PI D. LeRoith

12/1/2003-03/30/2005

The role of IGF1R in skin proliferation and differentiation

The goal of this project was to establish the role of IGF1 receptor in skin cellular processes that effect diabetes wound healing.

Honors and Awards

2001 Young investigator award, International Symposium on Insulin Receptor and Insulin
Action award, Geneva, Switzerland

2001	Dean's Award, Tel-Aviv University, Israel
2002	Travel Grant award from 38th Annual Meeting of the EASD, Hungary
2003	Minerva Short-Term Student Research Grant, (DKFZ), Germany
2004	Dean's Award, Tel-Aviv University, Israel
2003-2005	NIH-TAU Graduate Excellence Partnership Program, NIDDK, NIH
2010	Young investigator award, American Diabetes Association
2010	Postdoctoral travel award, American Diabetes Association, Orlando, FL
2013	Travel award, 2013 Alliance for Healthy Aging Symposium, Groningen, Netherlands

Memberships in Professional Societies and Other Experience

2001-2004	Member, Israel Endocrine society
2002	Member, Israel Diabetes Association
2004	Member, American Society for Cell Biology
2002-2005	Member, European Association for the Study of Diabetes
2008	Member, American Endocrine Society
2008-present	Member, American Diabetes Association
2008-present	Reviewer, American Journal of Physiology-Endocrinology and Metabolism
2012-present	Review committee, Undergraduate Research Opportunity Program
2014-present	Reviewer, Molecular Metabolism
2014	Reviewer, Peptides
2014	Reviewer, Current Aging Science
2016	Reviewer, Molecular and Cellular Endocrinology

Teaching:

2001-2005	Class Instructor in Histopathology (medical students), Tel Aviv University
2002-2005	Teaching Assistant, Department of Pathology, Tel-Aviv University
2002-2006	BS/MS research, Supervisor, Tel-Aviv University
2013-present	Undergraduate research opportunity program (UROP), Faculty research sponsor, University of Michigan
2016	Invited lecturer, Chemistry 290-Twenty two ways to think about drugs, University of Michigan

Invited Seminars:

2014	Hypothalamic control of aging in long-lived mice models, MichBio, Detroit
2015	SPH Nutrition, University of Michigan
2015	Molecular and Cellular Endocrinology, City of Hope, Duarte, CA
2016	Department of Biological Sciences, Texas Tech University
2016	Human and Evolutionary Biology, University of Southern California
2016	IBio, Wayne State University, Detroit, MI

Selected Extramural Presentations:

Israel Diabetes Association Annual Meeting. IRS1 and IRS2 have distinct roles in primary skin keratinocytes and skin fibroblasts. **2001, Oral presentation**

Annual Meeting of the Israel Endocrine society. Different roles for IRS2 in primary skin keratinocytes and skin fibroblasts. **2001, Oral presentation**

38th Annual Meeting of the European Association for the Study of Diabetes, Budapest, Hungary. IRS2 have distinct roles in primary skin keratinocytes and skin fibroblasts. **2002, Oral presentation**

Annual Meeting of the Israel Endocrine society. The Role of Insulin Signaling in Diabetes Skin Complications: An Organotypic Skin Co-culture Model. **2003, Oral presentation**

65th Annual Meeting of Society of Investigative Dermatology, St. Louis, MO. Differential roles of insulin and IGF-1 in skin - an organotypic co-culture model. **2004, Oral presentation**

90th Endocrine Society Annual Meeting, San Francisco, CA
Overexpression of human interleukin 6 prevents diet-induced obesity by suppressing food intake and increasing energy expenditure. **2008, Oral presentation**

69th Annual Meeting of the American Diabetes Association, New Orleans, LA.
Deletion of insulin receptor substrate 2 (Irs2) in leptin receptor (LepRb) expressing neurons causes obesity and diabetes. **2009, Oral presentation**

Invited Speaker of Keystone Symposia on Diabetes, Vancouver, Canada
Inactivation of Foxo1 in leptin receptor (LepRb)-expressing neurons reverses obesity and diabetes, caused by deletion of insulin receptor substrate 2 (Irs2). **2010, Oral presentation**

70th scientific sessions of the American Diabetes Association, Orlando, FL.
Decreased Irs2 signaling ameliorates brain pathologies and extends survival in a mouse model of Huntington disease. **2010, Oral presentation**

Invited Speaker of the 42 Annual Meeting of the American Aging Association, Baltimore, MD
Hypothalamic regulation in crowded litter mice: Early life control of aging and longevity. **2013, Oral presentation**

Invited Speaker of the 76th scientific sessions of the American Diabetes Association, New Orleans, LA.
Growth Hormone Receptor (GHR) Regulates Hepatic Glucose Production in Nutrient-sensing Leptin Receptor Expressing Neurons. **2016, Oral presentation**
